DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 14-23, 33-50, and 60-67 drawn to a channel state memory configuration and buffering means for a data streamer, classified in class 710, subclass 52.
- II. Claims 24-32, and 51-60 drawn to a data streamer with a channel state memory configuration, buffer means and a transfer engine, classified in class 710, subclass 33.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system disclosed in claims 24 and 51 can be used to fully carry out DMA

operations. The subcombination has separate utility such as a simple storage means with no internal transfer capability.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eron J Sorrell whose telephone number is 703 305-7800. The examiner can normally be reached on Monday-Friday 9:00AM - 5:30PM.
